

The RK-9000S is the lightest tool offered in the high production RK-9000 series. These tools are simple to operate and very easy to service. With a redesigned ergonomic grip, light weight and low maintenance the RK-9000S is a great solution for high levels of production. The RK-9000 series was designed with authorized service center maintenance in mind with only minimal care required from the end user. The RK-9000S is a powerful tool that can keep up with the most rigorous riveting applications.

The Raw Facts:

Model # RK- 9000S

- Weight - 2.75 Lbs.
- 1-2 second cycle time
- Sealed system design requiring minimal operator maintenance
- Installs 3/32", 1/8" & 5/32" rivets
- Easily adjustable, extreme vacuum mandrel collection system
- 0.670" stroke
- 1,640 lbsF pull force

2 Year Warranty

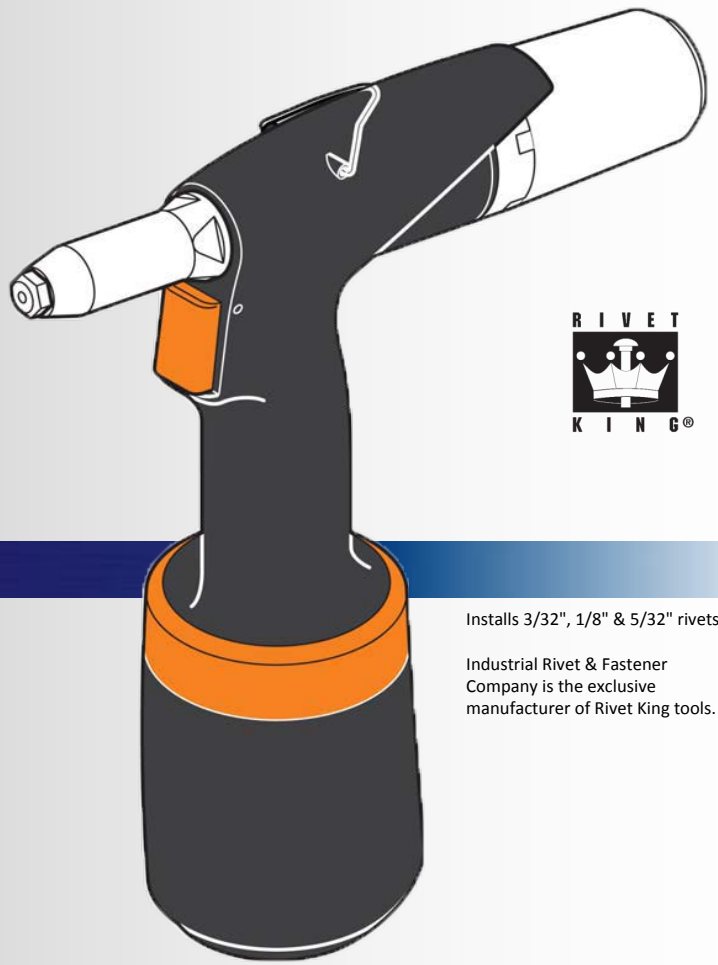

The RK-9000 series of tools come from the factory with a 2 year warranty. This does not cover abuse, tampering or wear components but does cover everything else. General maintenance should be performed every 500,000 strokes or once every three years. That's right, we said **500,000 strokes**. Having this done at a factory authorized service center takes the guesswork out of the equation for your maintenance department and helps you focus on what you do best. Being productive.

Jaws of victory

While many competitors are still using an outdated 2 jaw system, all RK-9000 series tools use 3 jaws. The 3 jaw system is inherently better because of how efficiently it grabs the mandrel on three sides as opposed to two which helps minimize scraping and provide longer jaw life. They are also affordable and often cost less than half that of competing tools.

Ready?

If large production runs are the norm, you should give the RK-9000 series tools a serious look. The RK-9000 series embodies some of the most versatile, user friendly rivet tools available today. We look forward to hearing from you and sharing what the RK-9000 series can do for you.

Installs 3/32", 1/8" & 5/32" rivets.

Industrial Rivet & Fastener Company is the exclusive manufacturer of Rivet King tools.

Safe - Flexible - Durable

When the mandrel collection unit is removed from any of the RK-9000 tools, the vacuum is automatically disengaged preventing any spent mandrels from being ejected out the rear of the tool. This makes it especially **safe** when being tethered by a balancer in a near eye level position. The air supply is connected to the ring at the top of hydraulic jug. This ring rotates 360 degrees for left or right handed operators. This makes the tool **flexible** for whatever the operator may need. The high durometer rubber boot that surrounds the hydraulic jug, makes the RK-9000 series less susceptible to impact damage and increases the overall **durability** of the tool. The RK-9000 series was built with safety, flexibility, durability and low user maintenance in mind. If high volume riveting in a dynamic environment is something you deal with, the RK-9000 tools are worthy of your review.
