

The KingSet™ is one of the best tools on the market for semi-automatic rivet installation. You can install 1/8" rivets with a cycle time of only 1-2 seconds. Combine that with low operator fatigue and a magazine reload time of only 5-10 seconds and you end up with an unmatched system to help cut your assembly times by up to 40%!

## The Raw Facts:

Model # RK-4500KS5

- Weight - 5.5 Lbs.
- 2 second cycle time
- 8-10 second reload time
- 1/8" - 5/32" rivets
- Mandrel collection system
- Low operator fatigue

Model # RK-4500KS6

- Weight - 5.5 Lbs.
- 2 second cycle time
- 8-10 second reload time
- 3/16" rivets)
- Mandrel collection system
- Low operator fatigue

## Rivets

The KingSet™ uses standard production rivets, machine loaded onto a plastic strip. Using off the shelf rivets keeps costs low and also allows for the occasional hand fed rivet when the situation arises.

## The Bottom Line

KingSet™ tools have helped fabricators stream line the assembly of appliances, automotive products and electronic chassis around the globe. When you choose KingSet™, JHP Fasteners in conjunction with Industrial Rivet's Application Engineers will conduct an in-depth evaluation of your operations and make recommendations on how this automated, handheld tool can best work in your environment. Simply put, JHP Fasteners and Industrial Rivet will be there to guide you through the application process and will continue to be there long after you adopt and implement this tool.

## Did we mention it's flexible?

You can easily negotiate the KingSet™ tool around a large assembly with nothing holding you back but the length of your air line. You're not tied to bulky add-ons for every rivet you put in. You don't have a mile long my-lar tape to get tangled up while you're trying to work. It just works, when you want and wherever you want it to.

## Ready?

If you are involved in semi or full production riveting you should really give the KingSet™ a serious look. It's proven technology that can save you both time and money. Please contact us directly so we can help you determine if this tool is right for your application. If this tool fits your needs we would be happy to setup a demonstration at your facility and test it on your parts.
